

Agriculture Solutions

Fumigation Solutions

Fumigation Films are widely used to control wide range of soil borne pests including many root and foliar disease pathogens, plant parasitic nematodes, and weed seeds or vegetative propagules. Taldeen provides fumigation film based on solar energy up to 3 months.

- Taldeen Fumigation Film is made of strong plastic. This specialized plastic film comes in 5 layers.
- Our state-of-the art machine allows us to give uniform thickness all around the film and to use several additives in a very efficient way.
- Taldeen provides Fumigation Solutions in several sizes starting from 1.5 m up to 9 m, with a thickness range of 60-90 microns.
- Taldeen Fumigation Solutions come into 2 types which are:
 - Normal Standard Film for up to 3 months.
 - Heat Absorber Film for faster and higher fumigation efficiency up to 3 months.

Product Standouts

- UV stabilizers - our quality additive gives the film enhanced protection against the harmful effects of the sun, increasing its usable life.
- Taldeen is ready to develop fumigation film based on water vapor or any other technology as per customer requirements.

Taldeen technical team are ready to provide any support and recommendation.

Applications

- Fumigation Film
- Direct covering film
- To control weeds, pests and diseases

Product Specifications

Specs	3 Months
Film Thickness	60 – 90 microns
Film Width	From 1.5 m up to 9 m
Light Transmission	Up to 90%
Thermal Effectiveness	Clear
Color	As per customer request
Roll Length	1 meter to 1.6 meters (depending on film width)
Roll Width	76 mm
Inner Core	Black wrap
